

State Supplied VFC Influenza Vaccine administered to ND Medicaid recipients age 0 – 18 years of age.

If you, the provider, have not received your full order of state supplied VFC influenza vaccine from NDDoH VFC Program and you run short, you should borrow from your private stock of influenza vaccine. You will bill ND Medicaid as if it is state supplied influenza vaccine with the appropriate CPT® code appended with modifier SL (\$0.00) and the appropriate vaccine administration CPT® code. When you receive your state supplied VFC influenza vaccine you will replenish your private stock. Information received from the NDDoH VFC Program indicates that VFC providers can expect to receive their remaining state supplied VFC influenza vaccine in the coming week.

Per discussion with the NDDoH VFC Program it is appropriate to borrow from your private stock when you temporarily run out of VFC influenza vaccine. ND Medicaid will not allow/reimburse the provider for influenza vaccine when you temporarily run out of state supplied VFC influenza vaccine and know you will be receiving more state supplied VFC influenza vaccine from the NDDoH VFC Program.
